Insight Performance

Improve manufacturing equipment utilization and operational efficiency

Insight Performance is a cloud solution for manufacturing equipment and production event data collection, storage, monitoring and analysis. This cost-effective solution helps increase plant asset utilization and performance by providing accurate information on equipment downtime and efficiency through intuitive and user-friendly KPI dashboards. Insight Performance empowers operators and decision makers with the information needed to take immediate corrective action, and facilitates continuous improvement of plant performance with advanced reporting and analysis capabilities. Optimizing equipment efficiency increases the capacity utilization of existing assets and helps manufacturing organizations maintain profitability and competitiveness.

The Insight Performance Difference

Insight Performance is an economical software-as-a-service application for monitoring, analyzing and improving manufacturing equipment utilization and overall efficiency. The cloud solution provides fast deployment and time to value without the cost and effort of establishing and maintaining an IT infrastructure.

Performance Data Collection

Quickly get started collecting and storing equipment related event data through either operator entry using the web user interface, event notifications pushed from edge devices or through integration with IIoT enabled sensors and smart devices, as well as existing plant software.

Operator Empowerment

Empower operators to drive plant performance with real-time information on downtime and KPIs in a ready to use equipment dashboard. With increased visibility, operators can quickly identify and counter the main causes of inefficiency and downtime.

Advanced Reporting and Analytics

View and analyze equipment utilization information and perform root cause analyses in intuitive charts and reports. Create dashboards for web and mobile devices that can be viewed anytime, anywhere across the business. The responsive newsfeed and alerts from the solution's advanced analytics enable improved decision making.

Enterprise Wide Performance Management

Standardize KPI's, share insights and best practices and elevate plant performance consistently across the business. Simply define a set of standards for equipment KPI's, utilization states and reasons and use these for data collection from multiple plants. The cloud provides an immeasurable performance and storage capacity potential for collecting large amounts of data and virtually connecting unlimited users.

Low Total Cost of Ownership

There is no need to invest in costly hardware servers, ongoing maintenance or software upgrades with our cloud-based applications and data storage. Our annual subscription model offers a scalable approach to meet both small plant and large deployment requirements, as well as accommodating future growth.

Performance Management for OEMs and VAR's

Insight Performance is a fantastic new opportunity to provide customers with a value added solution that helps them fully utilize the capacity and performance that your solution offers. It also gives you the ability to compare and benchmark multiple of your solutions to gain new insights into downtime patterns, reliability and performance improvement potentials. This knowledge allows for offering new value added services to customers.

Secure

Insight Performance and the Insight Platform powered by Wonderware Online is built on Microsoft Azure's secure and reliable cloud technology and services.
